-------------------------	----

1. Background

We have prepared this Functional Specification Document (FSD) for our client Tamweel Aloula in which we shall be developing the Gaps identified and mentioned in the BPR (Business Process Review) for Customer Management in Transact with the required functionalities.

To meet Tamweel's requirements related to Customer Management, following gaps were identified during Business Process Review – BPR, where required functionality is either not currently available or not as per client requirement in Transact.

By signing this document or otherwise approving or accepting it, Tamweel indicates its acceptance and approval for Systems Arabia to proceed with the work involved in designing and developing such proposed functionalities.

- ***Introduction***

Tamweel Aloula is one of the first financing company in KSA providing a unique digital experience that facilitates the process of obtaining financing solution from anywhere at any time. Tamweel Aloula is 100% digital platform which offers Retail and Corporate financing in Saudi Arabia.

This document contains the solution to the requirements pointed out in the Business Process Review – BPR sheet.

- Requirement**

Following gaps are addressed in this document:

S.No	Requirement Reference	Summary Description	Gap Type
1.	WS001-CU-01-01	A service will be required to update the expiration of Legal id address based on the latest expiration date from YAQEEEN (It will also be discussed during the interface session).	Customization
2	WS001-CU-01-02	A service will need to update the customer national address based on the latest data from YAQEEEN (It will also be discussed during the interface session).	Customization
3	WS001-CU-01-03	All the fields on customer application should be aligned with the infinity front office with respect of static data Management.	Configuration
4	WS001-CU-01-04	Simah report Generation should be available under Customer 360 Menu to check the customer external obligation.	Customization
5	WS001-CU-01-05	Both options (manual and through interface) should be available in the system to update customer record with respect of address and employment details.	Customization
6	WS001-CU-01-06	A new version is required for Onboarding of Vendors and updation of existing vendor details with additional fields as agreed in Vendor field details.	Customization

- **Reference Documents**

Following documents will be referred for reference and requirements:

S.No	Document
BPR Gap Sheet of version 1.3	 WS01-Cust_Tamweel_ BPR_Gap Analysis.V.1.

- **Glossary**

Abbreviations	Description
CBS	Core Banking System
BRD	Business Requirement Document
BPR	Business Process Review
FSD	Functional Specification Document
CUS	Customer

2. Assumptions and Dependencies

- It is assumed that all requirements will be addressed through this FSD as per Business requirement document for each gap of BPR.
- All the Screen Shot are for reference Only and may have different screen view after development but with same functionality. Final delivery will be in Transact Explorer Version.
- API routine names are described as example after development routines will be named as per the convention of project.
- FSD is prepared considering all gaps identified in BPR. Any newly requested functionality which is not under the scope of this document will be catered as CR in future.
- The gaps have dependencies on Infinity which will be align with the Infinity Team, these gaps are mentioned in the dependencies section and relevant gaps.
- Details of API, New tables and Amended tables, Local fields are given in each gap proposed functionality and can be referenced from the relevant area.

3. Existing Functionality

The Customer Application contains all the basic information about the Customer. Transact is a customer-centric system so all details about customer is available at one place which is Customer 360 View. All the date management of customer static information is handled within the Transact, with various options available under the dashboard like Customer Amendment, Customer Employment Details Update, Customer Address Details Updates, Set/Remove posting restrict and Customer Enquiry 360.

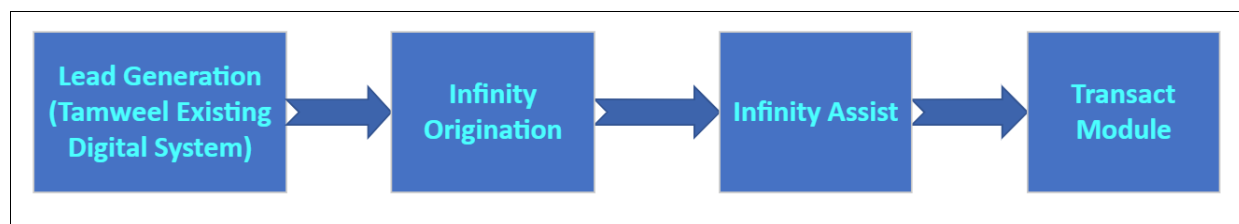

Customer Lead generation will be handled through the Tamweel existing digital system then data will be landed on the infinity origination system, after the success of above process the customer application will be on infinity assist, Once the application is successfully approved from Back office User the application will be landed to Transact.

4. Existing Workflow in Transact

The customer application stores all the static information pertaining to the customer. The existence of these customer record minimises the input of data as there are many applications in Transact which refer to the customer records before processing. Therefore, it is compulsory to get customer basic details before any activity is recorded in Temenos Transact.

As already described above that customer will be onboarded through the Digital channel which is Infinity front end and after approval from Back office all static data will be landed in Transact system then all the Data Management can be managed as and when required.

Below is the workflow of Individual Customer Onboarding through Infinity and after completion of below mentioned workflow all the static information of customer will be available on Transact Core system. Once customer onboarded in Transact the Data Management process can be done with multiple options as described below in details.

16. Proposed Solution Description

• *Requirement from (WS001-CU-01-01)*

SUMMARY/ DESCRIPTION

A service will be required to update the expiration of Legal id based on the latest expiration date from YAQEEEN.

PROPOSED SOLUTION

- When a customer is onboarded, details related to expiry of customer's ID/Iqama will be stored in transact under the customer's application.
- Service will be executed to extract the list of customers where the legal ID expiry is within the range of parameterized value for pre and Post expiry cases.
- A parameterized value with 10 days will be set in system if the customer expiry date falls under the past ten days, then system will create the list of customers with expired IDs within range.
- If Expired ID exceeds defined parametrized date range it will be excluded from the list I,e if any ID expired on 1st then till 10th it will remain in list and after 10 days it will be excluded from list and user can update it manually afterwards.
- The Service will be triggered on Daily COB based.
- Expired IDs with closed loans will be excluded from the list which will be pushed to Yaqeen.
- The details of those customer only will be pushed to the YAQEEEN and check the response if there will be any latest details available so get them from the YAQEEEN via a middleware and share them with transact in the customer application.
- If there will be any technical error in between of running service there will be an enquiry available to check the data which has error or not updated.
- Solution will be finalized after discussion with Infinity/Technical team.

• Requirement from (WS001-CU-01-02)

SUMMARY/ DESCRIPTION

A service will need to update the customer national address based on the latest data from YAQEEEN.

PROPOSED SOLUTION

- When a customer is onboarded, details related to national address will be stored in transact under the customer's application.
- Whenever customer will ask Tamweel to update his national address the back officer user of Tamweel will call the service from this specific version in the transact to get the updated address and store into the transact there should be the maker and checker role available.
- Solution will be finalized after discussion with Infinity/Technical team.
- Integration will be required in the customer module of transact and when the customer address needs to be updated the YAQEEEN interfacing will be called to fetch the updated National Address information from the YAQEEEN whenever required by Tamweel.
- In Customer module Under Personal Info – National Address section Two fields will be added as shown below,

1. Address Update Mode

- Interface
- Manual

2. Remarks

Address Update Mode Interface	Remarks
Clear	Log Id
Interface ✓	Longitude
Manual	

- First field will be Address Update Mode Field with a dropdown menu in which User can choose two options Manual or Interface. If manual option is selected by User then the data related to Customer's address will be updated manually (i,e Address, District, City etc).

- Secondly if Interface option is selected by User, second field “Remarks” will become mandatory to input the reason for calling record from Yaqeen interface as this activity will be a charged activity from interface. After inputting Remarks User will commit the record then the data will be called from Yaqeen interface and related fields of National Address will get data from interface automatically.
- Afterwards it will require authorization to save data in Transact.

- It will also be discussed during the interface session. Solution will be finalized after discussion with Infinity/Technical team.
- Requirement from (WS001-CU-01-03)**

SUMMARY/ DESCRIPTION

All the fields and list of values on customer application should be aligned with the infinity front office with respect of static data Management.

PROPOSED SOLUTION

- The same set of fields which will be agreed in customer onboarding session will be configured into the Transact and the values/information will be displayed under the customer enquiries.
- The new fields (if any) to be used while customer onboarding the same will also be displayed in the Transact screen/version.
- Field matrix will be discussed with Tamweel after BPR session of Infinity Front End and the same fields will be displayed on Transact after confirmation from Tamweel.
- If any additional field will be required to add in Transact it will be added in LOCAL.TABLE

LOCAL.TABLE Audit

LOCAL.TABLE / LAST.NAME.ARABIC

Description
Lat Name (Arabic)

Short Name*
Last Name (AR)

Maximum Char
25

Minimum Char

Char Type

- Then Local Table record will be added to LOCAL.REF.TABLE.

LOCAL.REF.TABLE Audit

Local Table No 202
L.REGION.ID - L.REGION.ID
Sub Assoc Code 202

Local Table No 203
L.SAL.ST.DT - L.SAL.ST.DT
Sub Assoc Code 203

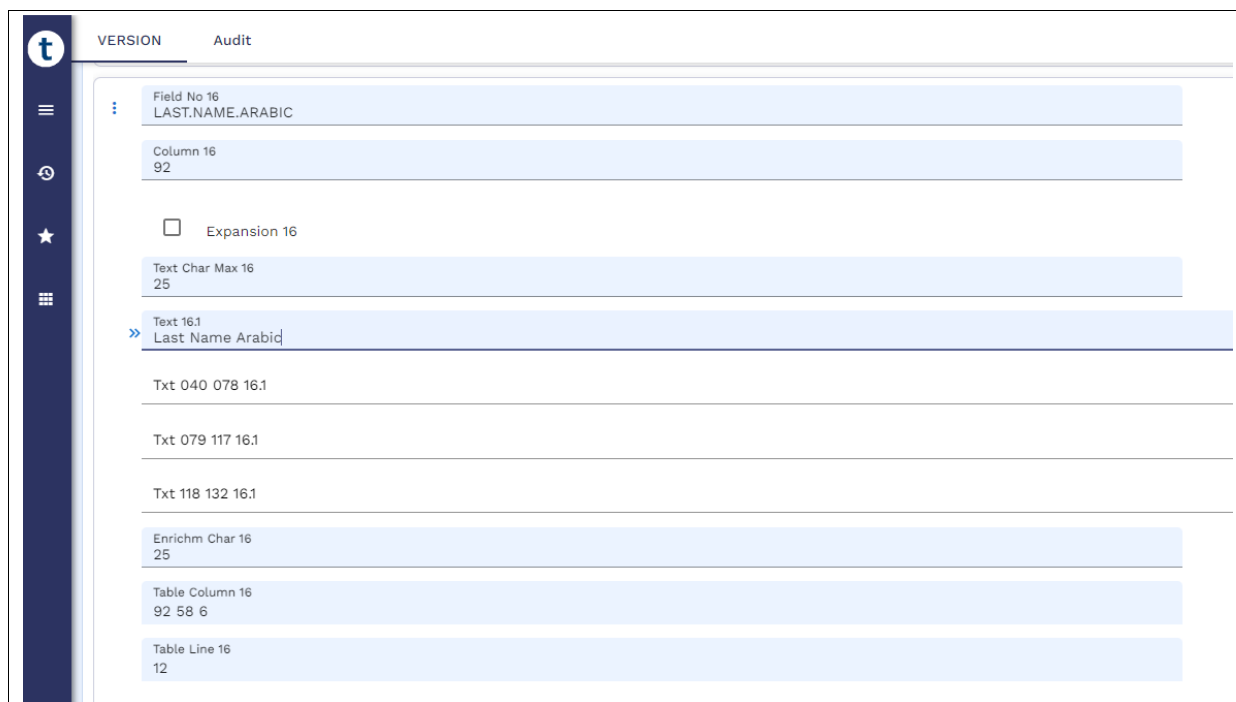

Local Table No 204
L.NAT.UNIF.NO - L.NAT.UNIF.NO
Sub Assoc Code 204

Local Table No 205
L.EMP.STS - L.EMP.STS
Sub Assoc Code 205

Local Table No 206
L.EMP.TYPE - L.EMP.TYPE
Sub Assoc Code 206

Local Table No 207
LAST.NAME.ARABIC
Sub Assoc Code 207

- Now the record of LOCAL.REF.TABLE will be added to Customer version and after committing record it will be displayed at required destination.

- Latest field level details of Customer Module which are agreed by TA and Infinity are provided in below sheet.

- **Requirement from (WS001-CU-01-04)**

SUMMARY/ DESCRIPTION

Simah report View should be available under Customer 360 Menu to check the customer external obligation.

PROPOSED SOLUTION

- SIMAH report will be generated from Digital system and the same report will be saved in Transact.
- Under enquiry user can view this report.

- If any new report will be generated afterwards from Digital system, then new report will replace the old one in Transact system.

• Requirement from (WS001-CU-01-05)

SUMMARY/ DESCRIPTION

Both options (manual and through interface) should be available in the system to update customer record with respect of address and only Manual option will be available to update Employment details.

PROPOSED SOLUTION

- Integration will be required in the customer module of transact and when the customer Address needs to be updated the interfacing will be called to fetch the updated National Address Information from the Yaqeen Interface whenever required by Tamweel.
- Both details Manual and Interface will be available to User Under Personal Info – National Address which can be used when required.
- For first Option in Customer module Under Personal Info – National Address section Two fields will be added as shown below,

1. Address Update Mode

- Interface
- Manual

2. Remarks

Address Update Mode Interface	Remarks
Clear	Log Id
Interface	Longitude
Manual	

- First field will be Address Update Mode Field with a dropdown menu in which User can choose two options Manual or Interface. If manual option is selected by User then the data related to Customer's address will be updated manually (i.e Address, District, City etc).
- Secondly if Interface option is selected by User, second field "Remarks" will become mandatory to input the reason for calling record from Yaqeen interface as this activity will be a charged activity from interface. After inputting Remarks User will validate the record which will call the data from Yaqeen interface and related fields of National Address will get data (i.e Address, District, City etc) from interface automatically.

- A routine will be added to customer version and when User will select the option Address update mode Interface the service will be called.
- When the service executed system will get specific information related to Address of Customer from Yaqeen portal and put the updated data in specified fields of Transact.
- Solution will be finalized after discussion with Infinity/Technical team.

VERSION,	Audit
Input Routine 1	▼ +
Auth Routine 1	▼ +
Report Locks Yes	▼
Gts Control	▼
Description Customer	🌐
Assoc Version 1 CUSTOMER,ADDRESS - Physical Address	▼ ⋮
Assoc Version 2 CUSTOMER,CONTACT - Contact Details	▼ ⋮
Assoc Version 3 CUSTOMER,INTRO.DETS - ID Doc	▼ ⋮
Assoc Version 4 CUSTOMER,RELATION - Relation	▼ ⋮
Assoc Version 5 CUSTOMER,CRM.FURTHER.DETS - Further Details	▼ ⋮

Assoc Version 7 CUSTOMER,CRM.RESIDENCE - Residential Details	▼ ⋮
Assoc Version 8 CUSTOMER,CRM.COMM - Communication Details	▼ ⋮

- For Second part of this gap in Customer module Under Update Employment Details Section one option will be available as shown below,

3. Employment Update Mode

- Manual

Employment Update Mode Manual	Reason/Remarks
----------------------------------	----------------

- User will be able to update Employment details of specific customer manually.

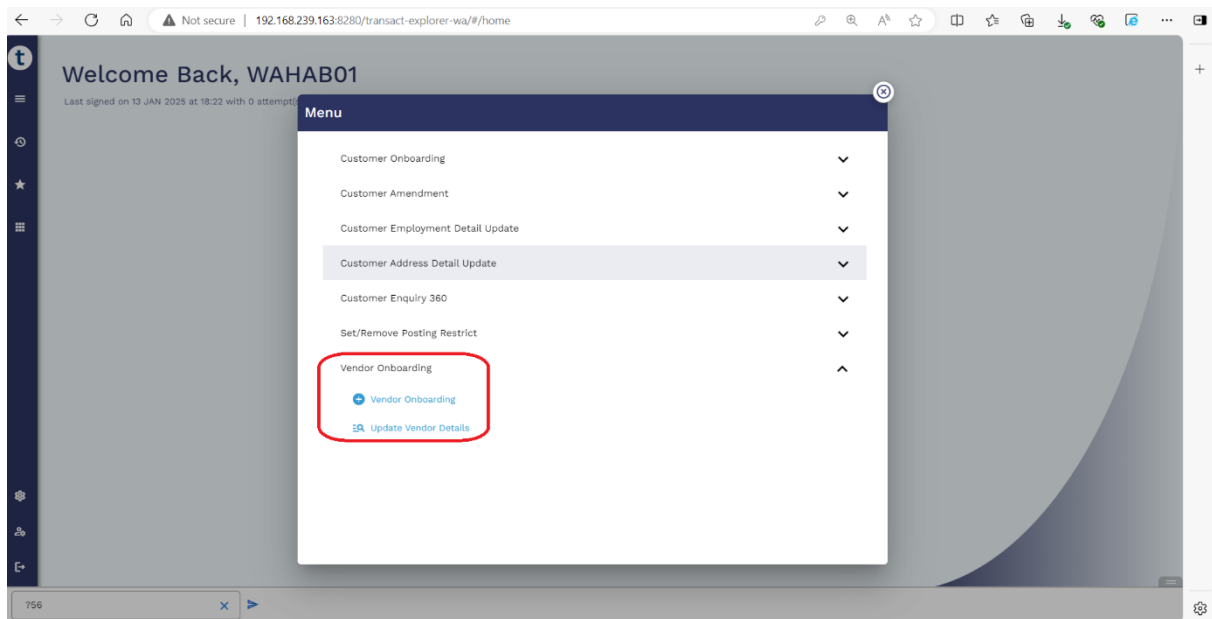

Requirement from (WS001-CU-01-06)

SUMMARY/ DESCRIPTION

- A new version is required for Onboarding of Vendors and updation of existing vendor details with additional fields as agreed in Vendor field details attached below.

PROPOSED SOLUTION

- A new version of “Vendor Onboarding” will be created and under this version two sub versions will be attached with name “Update Vendor Details” and “Unauthorized Vendor” and it will be attached with Main Menu of Customer Onboarding.

- Further as per requirement new Field will be added to Vendor Onboarding version as agreed in Vendor fields List “Type of Vendor” with LOVs I,e Ijara Vendor, Tawarruq Vendor, Murabaha Vendor etc (Tamweel to share LOVs details)

The screenshot shows the 'Vendor Details' tab in the Temenos system. The 'Type of Vendor' dropdown menu is open, displaying the following options: Clear, Ijara Vendor, Murabaha Vendor, and Tawarruq Vendor. The dropdown menu is highlighted with a red box.

- Further as per requirement new Field will be added to Vendor Onboarding version i,e “SAP Vendor Number”.

The screenshot shows the 'Vendor Details' tab in the Temenos system. The 'SAP Vendor Number' field is highlighted with a red box. The 'Account Officer' field is also visible, showing a dropdown menu with the 'Account Officer' option selected.

- Further as per requirement new Field will be displayed at Vendor Onboarding version I,e “VAT ID” & “ID Number”.

- Field level details of Vendor Module and LOVs with List of Vendors to are provided in below sheet.
