1 Purpose

The purpose of this document is to document Tamweel Aloula's business requirements for Financial Accounting and Reporting Module.

The scope of the document is limited to collecting the requirements from the client's representatives. We do not recommend that any designs are included in this document.

3 Overview / Scope of Functional Requirements

3.1 Requirements Overview

3.1.1 Overview of Financial Accounting & Reporting

The Transact Financial Accounting and Reporting module will help you understand how core tables such as Category, Country, Industry, and Sector are linked, identify various types of accounting entries, and explore the different date types associated with these entries. It also covers the conditions for consolidating accounting entries and highlights the key differences between the traditional General Ledger and T24 Transact's virtual GL.

3.2 Summary of Requirements

GAP Reference	Requirement Title	Gap Type
WS08-01-01	Consol Variables for Asset & Liability	Configuration
WS08-01-02	Product Type	Customization
WS08-02-01	Consol Variables for Profit & Loss	Configuration
WS08-09-01	Reporting Heads	Configuration
WS08-11-01	Bulk Upload Functionality – FT	Configuration
WS08-11-02	Multi Debit & Multi Credit Functionality	Customization
WS08-11-03	Multi Debit & Multi Credit Functionality – Bulk Upload	Customization
WS08-11-04	Posting Restriction	Configuration
WS08-11-05	6 Eye Principle	Configuration
WS08-23-01	DAO	Customization
WS08-26-01	Financial Enquiries	Configuration
WS08-27-01	User Menu	Configuration
WS08-28-01	Account Parameter	Configuration

4 Detailed Description of Functional Requirements.

4.1 Consol Variables - Asset & Liabilities | WS08-01-01

Following are the Consolidate.Cond variables for Asset and Liability has been agreed:

1. CATEGORY
2. SEGMENT
3. SECTOR
4. RESIDENCE
5. TIME
6. INDUSTRY
7. DAO
8. EMPLOYMENT STATUS
9. EMPLOYMENT TYPE
10. REGION
11. PRODUCT TYPE

The above-mentioned variables will be defined in ASSET&LIABILITY record of CONSOLIDATE.COND.

4.2 Product Type | WS08-01-02

To meet TA's requirement, the Product Type—defined as the purpose of the financing, such as "Healthcare" in the case of Murabaha for Healthcare—needs to be introduced as one of the consol variable. To facilitate this, a local field named **L.SUB.PRODUCT.TYPE** will be created in the **SMB.DEAL.DETAIL** and **IS.CONTRACT** table. This field will initially capture the product type data directly from the digital platform at the time of financing initiation.

Additionally, the same field **L.SUB.PRODUCT.TYPE** will be created in the **AA.PRD.DES.ACCOUNT**. During the creation of a financing contract, the product type will be automatically populated in the **AA.PRD.DES.ACCOUNT** table based on the reference record stored in the **IS.CONTRACT**. Once the financing contract is created, the captured product type will also be transferred and stored in the **ACCOUNT** table.

To enable mapping between the descriptive product type and a system-recognized code, another field called **L.PRODUCT.TYPE.CODE** will be added to the **ACCOUNT** table. A routine will be associated with this field, which will retrieve the relevant numeric code for the product type. This routine will access the **EB.SMB.H.GENERIC.PARAMS** table, locate the record **PRODUCT.TYPE.CODE**, and extract the numeric code corresponding to the value found in **L.SUB.PRODUCT.TYPE**—for instance, the code defined for "Healthcare." The retrieved code will then be stored in the **L.PRODUCT.TYPE.CODE** field in the **ACCOUNT** table.

Once the numeric product type code is populated, it will become part of the consolidation key used for reporting purpose.

Below is the reference screenshot of the coding table

EB.SMB.H.GENERIC.PARAMS	PRODUCT.TYPE.CODE
--------------------------------	--------------------------

Product Type Description	Code
Healthcare	PD001
Education	PD002

4.3 Consol Variables – Profit & Loss | WS08-02-01

Following are the Consolidate.Cond variables for Profit & Loss has been agreed:

1. PLCATEGORY
2. PLPRODUCT
3. PLSEGMENT
4. PLSECTOR
5. PLRESIDENCE
6. PLTIME
7. PLINDUSTRY
8. PLDEPARTMENT
9. PLEMPLOYMENT STATUS
10. PLEMPLOYMENT TYPE
11. PLREGION
12. PLPRODUCT TYPE

The above-mentioned variables will be defined in PROFIT&LOSS record of CONSOLIDATE.COND

4.4 Reporting Heads | WS08-09-01

TA requires the "TABS" & "TAPL" report to be configured in Transac as a Closing Type Report, Movement Type Report and YTD report for profit and loss. This requirement will be achieved by creating a records "TABS" & "TAPL" in the **RE.STAT.REPORT.HEAD** table. Furthermore, TA requires multiple extensions that allows the presentation of the "TABS" & "TAPL" in different column types. This will be accomplished by utilizing the COLUMN.TYPE field and selecting different column options from the drop-down menu. The following screenshot illustrates the Closing Type report.

The screenshot shows the configuration for the **RE.STAT.REPORT.HEAD** table. The **TABS** report is selected. The configuration includes the following fields:

- Description:** TAMWEEL ALOULA BALANCE SHEET
- Notes 1:** THIS REPORT IS THE CLOSING TYPE
- Output Mode:** (Empty)
- Heading:** TAMWEEL ALOULA BALANCE SHEET REPORT
- Line Narr Size 1:** 6
- Narr Hd 1 1:** LINE
- Narr Hd 2 1:**
- Split:** All
- Profit:** Local
- Amount Units:** All
- Zero Supp Det:** (Empty)
- Zero Supp Tot:** (Empty)
- Supp Group 1:** (Empty)
- Column Type 1:** CLOSING

Multiple extensions can be created through the **RE.STAT.REPORT.HEAD**, with the record ID distinguishing each report. For a movement type report, the record ID will be "TABS.MVMT" & "TAPL.MVMT" While the overall structure of the GL & PL will remain the same, this extension will only include the movement type columns, as specified by TA. The following screenshots illustrate movement type reports configuration.

RE. STAT. REPORT. HEAD	Audit	Reserved
RE. STAT. REPORT. HEAD / TABSMVMT		
Description TAMWEEL ALOULA BALANCE SHEET		
Notes 1 THIS IS A MOVEMENT TYPE REPORT		
Output Mode		
Heading* TAMWEEL ALOULA BALANCE SHEET REPORT		
+ Line Narr Size 1 6 Narr Hd 1 1 LINE Narr Hd 2 1 *****		
Split* All		
Profit* Local		
Amount Units All		
Column Type 1* OPENING - MOVEMENT Column Pos 1 Integer Size 1 Decimal Size 1 Abs Value 1 » Total Param 11 Total Column 11 Tot Constant 11 Head 1 1 Head 2 1		
Column Type 2* DTMOV - MOVEMENT Column Pos 2 Integer Size 2 Decimal Size 2		
Column Type 3* CRMOV - MOVEMENT Column Pos 3 Integer Size 3 Decimal Size 3 Abs Value 3 » Total Param 31 Total Column 31 Tot Constant 31 Head 1 3 Head 2 3		
Column Type 4* CLBAL - MOVEMENT Column Pos 4 Integer Size 4 Decimal Size 4 Abs Value 4		

Similarly, a year to date profit & loss report will be created through the **RE. STAT. REPORT. HEAD**, with the record ID differentiating this report. For the year to day profit & loss report, the record ID will be **"TAPL.YTD"**. In this

extension, the structure of the profit & loss report will remain the same, but the report will present the current month and year to date balances in separate columns, as required by TA. This can be achieved by setting two columns "CM - CLOSING" & "YTD - CLOSING" in **COLUMN.TYPE** field in **RE.STAT.REPORT.HEAD**. Following screenshot illustrates the YTD profit and loss report.

The screenshot displays the configuration screen for a financial report. At the top, there are tabs for 'RE.STAT.REPORT.HEAD', 'Audit', and 'Reserved'. The main title is 'RE.STAT.REPORT.HEAD / TAPLYTD', with 'TAPLYTD' highlighted in a red box. Below this, the 'Description' field contains 'TAMWEEL ALOULA PROFIT AND LOSS'. The 'Notes 1' field contains 'MOVEMENT TYPE REPORT', also highlighted in a red box. The 'Output Mode' is set to 'Heading'. The 'Heading' field contains 'TAMWEEL ALOULA PROFIT AND LOSS'. Below this, there are fields for 'Line Narr Size 1' (set to 6), 'Narr Hd 1 1' (set to 'LINE'), and 'Narr Hd 2 1' (set to '*****'). The 'Split' field is set to 'All'. The 'Profit' field is set to 'Local'. The 'Amount Units' field is set to 'All'. Below these, there are two columns for configuration. The first column, 'Column Type 1', is set to 'CM - CLOSING', highlighted in a red box. The second column, 'Column Type 2', is set to 'YTD - CLOSING', also highlighted in a red box. Both columns have their respective 'Column Pos' and 'Integer Size' fields.

4.5 Journal Posting – Bulk Upload | WS08-11-01

In Transact, the design should feature a dedicated version for FT adjustment entries. This version must support bulk file upload functionality, enabling users to upload a file with multiple adjusting entries at once, instead of processing individual FT(s) separately. Furthermore, the version should comply with the "four-eye principle," ensuring that it is exclusively accessible and managed by designated finance users.

A new version of **FUNDS.TRANSFER,TA.FU** will be created with the field **NO.OF.AUTH** set to **1**, as outlined in GAP# WS08-11-05. This version will be used to configure the Bulk Funds Transfer (FT) Upload Utility through **EB.FILE.UPLOAD**. As part of the setup, an **EB.FILE.UPLOAD.TYPE** record will be created using this version to define the format and fields required for uploading bulk FT entries, particularly for manual adjustment postings. The process begins with the user uploading a file containing adjustment entries. After uploading, the file is submitted for authorization. An authorized user will then review the contents of the file and either authorize or delete the uploaded FT records based on their assessment. To ensure proper access control, this version will be linked to the **Finance Menu**, making the functionality accessible only to designated users with the appropriate permissions.

4.6 Journal Posting – Multi Debit & Multi Credit | WS08-11-02

The Transact system is expected to incorporate functionality for multi-debit and multi-credit transactions, ensuring compliance with the four-eye principle. This functionality is essential for business units, particularly in Finance, that handle a significant volume of such transactions on a regular basis.

Multi-Debit refers to situations where multiple debit transactions are applied against a single credit, while multi-credit refers to the reverse scenario, where multiple credit transactions are applied to a single debit. To support these processes, the system will enable users to post, retrieve, and view multi-debit and multi-credit transactions efficiently. This will be available through a unified entry posting form, each associated with a unique Record ID, generated during the transaction. The Record ID allows users to easily access the results of a specific transaction or a set of related transactions.

The functionality required in this gap will be built on core FUNDS TRANSFER (FT) module in Transact, where for every single record one debit and one credit transaction is applicable. To cater Multi Debit Multi Credit requirement, a suspense internal account will be used to balance each FT record. This suspense internal account will be defined in a parameter. Following will be taking place:

1. DAO/ Department field currently not mandatory for PL and will be made mandatory for input for PL category line only. For internal accounts and customer accounts DAO/ Department field will be auto populated with their DAO.
2. Exchange Rate field will be open for input in case Currency is other than Local Currency.
3. In case of Foreign Currency transactions, Local Currency and Foreign Currency Amount fields for PL category line (Debit or Credit) will be auto populated from the other side of the transaction on validation of the record. PL category line will be considered in Local Currency. Auto recon field will be added.
4. Transaction type will be separately identified.
5. The sum of debits should be balanced against the sum of credits without considering internal suspense account.

Following is the mock screenshot for reference.

Multi Debit Multi Credit - Module (Voucher Screen)

TRANSACTION DATE 12/4/2024		VALUE DATE 12/4/2024	
Debit Information		Credit Information	
Multi Value Field	DEBIT BRANCH-1 SA0011000 DEBIT ACCOUNT-1 USD1000100011000 DEBIT PL CATEGORY-1 DEBIT FCY AMOUNT-1 375 DEBIT CURRENCY-1 AED DEBIT EXCHANGE RATE-1 0.267 DEBIT DEPARTMENT-1 11223344 DEBIT LCY AMOUNT-1 100.000	Multi Value Field	CREDIT BRANCH-1 SA0011000 CREDIT ACCOUNT-1 CREDIT PL CATEGORY-1 51001 CREDIT FCY AMOUNT-1 1125 CREDIT CURRENCY-1 AED CREDIT EXCHANGE RATE-1 0.267 CREDIT DEPARTMENT-1 11223344 CREDIT LCY AMOUNT-1 300.000

TOTAL DEBIT SUM 300.000		TOTAL CREDIT SUM 300.000	

4.7 Journal Posting – Multi Debit & Multi Credit – File Upload | WS08-11-03

In Transact, TA requires that the multi-debit and multi-credit functionality be available through the bulk upload feature. A specific version will be created for configuring the Bulk Upload Utility via EB.FILE.UPLOAD. Below is an illustration of the EB.FILE.UPLOAD configuration.

The EB.FILE.UPLOAD.TYPE record will be used to capture user-submitted bulk MDMC files for entries, including all the relevant fields.

In the first step, the user will upload a file containing accounting entries. After the file is uploaded, the user will submit it for authorization. The authorizer can then review the bulk upload and decide whether to authorize or

delete the uploaded file.

A sample screenshot for journal posting is provided below:

TRANSACTION DATE	VALUE DATE	BRANCH	ACCOUNT	PL CATEGORY	AMOUNT	CURRENCY	EXCHANGE RATE	DEPARTMENT	LCY AMOUNT	NARRATION	AUTO RECON ID	DEBIT / CREDIT
05/12/2024	05/12/2024	SA0011000	USD1402700010187		100	USD		1	1	100 ABC		DEBIT
05/12/2024	05/12/2024	SA0011000	USD1000100120187		100	USD		1	1	100 ABC		CREDIT

4.8 Journal Posting – Posting Restriction | WS08-11-04

The Transact system should be designed to allow TA to restrict the posting of manual entries. To enforce this, the system must include functionality that generates a restriction error when a user attempts to post an entry. Posting rights will be granted exclusively to designated finance users.

To meet the requirement, input restrictions will be applied to a specific group of users for the **FUNDS.TRANSFER** and **MULTI DEBIT & MULTI CREDIT** application. These restrictions will be enforced using the **APPLICATION** and **FUNCTION** fields in the **USER** table. As a result, users with input restrictions will not be able to process manual transactions. Only authorized users from the finance department will be granted the necessary **INPUT** function to post manual entries.

Note: This solution assumes that only authorized users are allowed to post manual transactions. If the requirement changes to include posting restrictions based on specific PL and Internal Categories, the solution may be revised accordingly.

4.9 Journal Posting – Six Eye Principle | WS08-11-05

TA also requires the implementation of the "six-eye principle" for posting manual transactions. Therefore, the system should be designed to include a mechanism that incorporates a maker, checker, and authorizer workflow.

To meet this requirement, a new version of FUNDS.TRANSFER, labeled **FUNDS.TRANSFER,TA.TRANS**, will be created. In this version, the field **NO.OF.AUTH** will be set to 2.

4.10 DAO | WS08-23-01

To fulfill TA's requirement of tagging a profit center to each financing deal, we will assign a profit center based on the Segment and Product combination. For instance, if Murabaha financing is provided for the Retail Segment, the

profit center will be "**Retail-Murabaha.**"

To implement this, we will use the product category in the Transact system, as different segments (Retail, Corporate, and SME) will have different product categories for Murabaha financing. Once the financing application is processed in Transact, a record will be created in the **SMB.DEAL.DETAIL** table. A local field, **L.PROFIT.CENTER**, will be introduced within this table.

A routine will be associated with this field to perform the following steps:

1. Check the product description in the **SMB.PRODUCT** field in **SMB.DEAL.DETAIL** table.
2. Cross-reference the product description with the category code in the **AA.PRD.DES.ACCOUNT** conditions.
3. Once the category code is identified, the routine will search the **EB.SMB.H.GENERIC.PARAMS** table to locate the corresponding **PROFIT.CENTRE** record.
4. The routine will extract the numeric **PROFIT.CENTRE** code associated with the found category code (e.g., the **PROFIT.CENTRE** code for "3701 (TAWARUK)").
5. The retrieved **PROFIT.CENTRE** code will then be stored in the **L.PROFIT.CENTER** field of the **SMB.DEAL.DETAIL** table.

After storing the profit center number in **SMB.DEAL.DETAIL**, it will be pushed to all reference records related to the request in the **L.PROFIT.CENTER** (new field to be created) field of the **IS.CONTRACT** table. Additionally, the same profit center number will be pushed to the **ACCOUNT.OFFICER** field in both the **AA.PRD.DES.ACCOUNT** and **ACCOUNT** tables once the financing deal is created.

Below is the reference screenshot of the coding table.

EB.SMB.H.GENERIC.PARAMS	PROFIT.CENTER
--------------------------------	----------------------

Product Code	Profit Center
3701	11223344
3702	66554433

NOTE: TA to provide the profit center numbers, so the same can be configured in Transact.

4.11 Financial Enquiries | WS08-26-01

TA Requires Following Enquiries:

1. Unauthorized Transactions
2. Transaction Entries
3. Account Statement Enquiry
4. Category Balance Enquiry
5. Forward Entries Enquiry
6. End of Day reports Enquiry
7. Journal Summary
8. Contract Balances Enquiry
9. Line Content Enquiry

These enquiries are available by core. All of these will be attached in the Finance menu.

4.12 Segregated User Menu | WS08-27-01

TA requires segregated user menus for input and authorization to maintain checks and balances. One user menu will be used for inputting a transaction, while other user menu will handle the authorization, implementing the maker and checker methodology.

This requirement will be addressed through the use of the applications **HELPTTEXT.MENU** and **HELPTTEXT.MAINMENU**, which will serve to create two distinct menus. These menus will be assigned to the respective users based on their roles. Users responsible for initiating transactions, creating lines, setting up internal accounts, and defining categories will be assigned the **input menu**. Meanwhile, users tasked with reviewing and authorizing the aforementioned actions will be granted access to the **authorization menu**.

4.13 Value Dated Accounting & Transaction Journal | WS08-28-01

TA requires a value-dated accounting system, where transactions with a future value date are posted as off-balance-sheet items until the specified date arrives and the customer account balances are affected on the value date only. Additionally, TA requires a report that displays daily transactions initiated across all modules in the system.

To address these requirements, the TXN.JOURNAL report will be enabled, which will provide detailed transactional information for all applications. Both of these needs will be addressed through the necessary configurations in the ACCOUNT.PARAMETER table:

1. Setting **VALUE.DATED.ACCTING** to "Y" will enable value-dated accounting.
2. Setting **BYPASS.TXN.JOURNAL** to "N" will enable the generation of the TXN.JOURNAL report.

5 Reference Documents.
